4.2 Light scatter. Most instruments measure light scattered by the cells at right angles to the laser beam (side scatter, SS) and light scattered in a forward direction (forward scatter, FS) (see Chapter 2.3.1). The amount of light scattered is affected by the size, shape and optical homogeneity of the cells (or other particles being measured).

6.1 Introduction. DNA analysis is, after immunofluorescence, the second most important application of flow cytometry. By measuring the DNA content of individual cells, we obtain information about their ploidy (see Section 6.3), of particular relevance in tumours, and, for a population, the distribution of cells across the cell cycle. The relationship between the DNA histogram and the cell cycle ...

CHAPTER 3: CALCULATION OF THE ENERGY CONTENT OF FOODS - ENERGY CONVERSION FACTORS. As stated in Chapter 1, the translation of human energy requirements into recommended intakes of food and the assessment of how well the available food supplies or diets of populations (or even of individuals) satisfy these requirements require knowledge of the amounts of available energy in individual foods.

The aspect ratio of a geometric shape is the ratio of its sizes in different dimensions. For example, the aspect ratio of a rectangle is the ratio of its longer side to its shorter side - the ratio of width to height, when the rectangle is oriented as a "landscape".. The aspect ratio is most often expressed as two integer numbers separated by a colon (x:y), less commonly as a simple or ...

Spatial selection is a vector process, but when you combine reclassification (discussed in Chapter 3) and overlay (discussed later in this chapter), the combination produces a raster version of spatial selection.

A Challenge to Critics of Chapter 3 By Don Stoner. Critics of my grandfather's book have suggested many possible errors. Among these, that the estimates may be too high, or that the events are statistically connected - so that fulfilling one prophecy will virtually guarantee fulfillment of another.

Chapter 3: ADC and DAC. Most of the signals directly encountered in science and engineering are continuous: light intensity that changes with distance; voltage that varies over time; a chemical reaction rate that depends on temperature, etc. Analog-to-Digital Conversion (ADC) and Digital-to-Analog Conversion (DAC) are the processes that allow digital computers to interact with these everyday ...
