A train horn is a powerful air horn that serves as an audible warning device on electric and Diesel locomotives. The horn's primary purpose is to alert persons and animals to an oncoming train, especially when approaching a grade crossing. The horn is also used for acknowledging signals given by railroad employees, such as during switching operations.

The H. K. Porter Company was one of this country's most well known locomotive manufacturers. It was the third largest producer, in terms of number of locomotives built, and was the leading producer of what Porter called 'Light Locomotives'. These were engines built specifically for industrial applications, mining, logging, plantations, or lightly built narrow gauge railroads.

mnpalmer wrote:Doors are 5 1/4" (or around there) but you can fit 6 1/2" speakers in by removing the plastic mounting bracket and making a ring out of MDF to mount the speaker. The tweeters are tiny, I fitted some Soundstream SPL speakers and had to cut out a lot of the back of the tweeter mount to fit them in. Looks fine once put back together however.
