C. tetani is a slender, gram-positive, anaerobic rod that may develop a terminal spore, giving it a drumstick appearance. The organism is sensitive to heat and cannot survive in the presence of oxygen. The spores, in contrast, are very resistant to heat and the usual antiseptics.

Pinkbook | Tetanus | Epidemiology of Vaccine Preventable ...

Epidemiologic evidence also suggests that mortality during the 1918–19 pandemic was mostly due to bacterial pneumonia. Figure 1 shows that age-specific rates of death correlated with the incidence of pneumonia rates, and not with the rate of influenza cases. 13 The length of time between the onset of illness and death also suggests a bacterial cause for many, if not most, cases during this ...

The exam is administered at over 140 testing centers in North America by Applied Measurement Professionals (AMP). Prior to applying for the CBIC examination, certain specific educational and practice requirements must be met.

CBIC Practice Exam Questions (Prep for the CBIC Exam)

In statistics, a full factorial experiment is an experiment whose design consists of two or more factors, each with discrete possible values or "levels", and whose experimental units take on all possible combinations of these levels across all such factors. A full factorial design may also be called a fully crossed design. Such an experiment allows the investigator to study the effect of each ...

Factorial experiment - Wikipedia

If clinical suspicion of Cushing syndrome, acromegaly, or other hormone excess exists, order appropriate tests. Because excess growth hormone secretion may not produce the clinical phenotype in all cases, especially if early in the course, a serum insulinlike growth factor-1 (IGF-1) level is recommended in all cases.
