Multiplying and Dividing, and Simplifying Rationals Frequently, rationals can be simplified by factoring the numerator, denominator, or both, and crossing out factors. They can be multiplied and divided like regular fractions.. Here are some examples. Note that these look really difficult, but we're just using a lot of steps of things we already know.

In this section we will discuss a couple of methods for solving equations that contain logarithms. Also, as we'll see, with one of the methods we will need to be careful of the results of the method as it is always possible that the method gives values that are, in fact, not solutions to the equation.

Section 2-13 : Rational Inequalities. In this section we will solve inequalities that involve rational expressions. The process for solving rational inequalities is nearly identical to the process for solving polynomial inequalities with a few minor differences.. Let's just jump straight into some examples.

Examples and extensions Trigonometric equations. A trigonometric equation is an equation  $g = 0$  where  $g$  is a trigonometric polynomial. Such an equation may be converted into a polynomial system by expanding the sines and cosines in it, replacing  $\sin(x)$  and  $\cos(x)$  by two new variables  $s$  and  $c$  and adding the new equation  $s^2 + c^2 - 1 = 0$ .. For example, the equation

In mathematics, a rational function is any function which can be defined by a rational fraction, i.e. an algebraic fraction such that both the numerator and the denominator are polynomials. The coefficients of the polynomials need not be rational numbers; they may be taken in any field  $K$ . In this case, one speaks of a rational function and a rational fraction over  $K$ .

Note again that when we solve these types of trig problems, we always want to solve for the General Solution first, and then go back and see how many solutions are on the Unit Circle (between 0 and  $2\pi$ ).. Factoring to Solve Trigonometric Equations. Note that sometimes we have to factor the equations to get the solutions, typically if they are trig quadratic equations.
