In this manual all commands are given in code boxes, where the R code is printed in black, the comment text in blue and the output generated by R in green. All comments/explanations start with the standard comment sign ' # ' to prevent them from being interpreted by R as commands. This way the content in the code boxes can be pasted with their comment text into the R console to evaluate their ...

An iterator is any object that, pointing to some element in a range of elements (such as an array or a container), has the ability to iterate through the elements of that range using a set of operators (with at least the increment (++) and dereference (\*) operators). The most obvious form of iterator is a pointer: A pointer can point to elements in an array, and can iterate through them using ...

### **<iterator> - C++ Reference**

A motorcycle transmission is a transmission created specifically for motorcycle applications. They may also be found in use on other light vehicles such as motor tricycles and quadbikes, go-karts offroad buggies, auto rickshaws, mowers and other utility vehicles, microcars, and even some superlight racing cars.

Keras backends What is a "backend"? Keras is a model-level library, providing high-level building blocks for developing deep learning models. It does not handle low-level operations such as tensor products, convolutions and so on itself.

### **Backend - Keras Documentation**

Returns a new array. In the first form, if no arguments are sent, the new array will be empty. When a size and an optional default are sent, an array is created with size copies of default. Take notice that all elements will reference the same object default. The second form creates a copy of the array passed as a parameter (the array is generated by calling #to\_ary on the parameter).
