This document contains information relevant to 'Extensible Markup Language (XML)' and is part of the Cover Pages resource. The Cover Pages is a comprehensive Web-accessible reference collection supporting the SGML/XML family of (meta) markup language standards and their application. The principal objective in this public access knowledgebase is to promote and enable the use of open ...

Cover Pages: Extensible Markup Language (XML)

RDFa (or Resource Description Framework in Attributes) is a W3C Recommendation that adds a set of attribute-level extensions to HTML, XHTML and various XML-based document types for embedding rich metadata within Web documents. The RDF data-model mapping enables its use for embedding RDF subject-predicate-object expressions within XHTML documents. It also enables the extraction of RDF model ...

1. Introduction. In an earlier article, 'Using XSL and XML to generate dynamic web pages from UNIFACE', I demonstrated how it is possible to generate web pages using XSL to transform XML documents into HTML for output to the web. This replaces the UNIFACE-specific method of web page generation with a standard method that is supported by the World Wide Web Consortium and which gained popularity ...

Generating dynamic web pages using XSL and XML

This layout can be used for any number of database tables - all that changes is the title and the data area. The contents of the scrolling area, menu, navigation and action bars are supplied in the XML file, therefore common templates can be used in the XSL file without any modification.. Within these two different layouts there are common zones - the menu bar, breadcrumb area, title ...
