Pico hydro is a term used for hydroelectric power generation of under 5 kW. These generators have proven to be useful in small, remote communities that require only a small amount of electricity - for example, to power one or two fluorescent light bulbs and a TV or radio in 50 or so homes. Even smaller turbines of 200-300 W may power a single home in a developing country with a drop of ...

Low head hydropower applications use tidal flows or rivers with a head of 20 metres (66 ft) or less to produce energy. These applications may not need to dam or retain water to create hydraulic head. Using the drop in a river or tidal flows to create electricity may provide a renewable energy source that will have a minimal impact on the environment.

If you have a river or stream flowing through your property, you have probably thought about harvesting some power from it. If the stream has some elevation drop that you can use, then you probably want to look at a conventional small hydro system like the ones here.... But, if your stream has little to no elevation drop, its clear that there is still a lot of energy there just in the velocity ...
